

The Informant Questionnaire on Cognitive Decline in the Elderly (IQCODE)

If for any reason the 3MSE Cognitive Function Examination cannot be administered to the participant, it will be necessary to complete the Informant Questionnaire on Cognitive Decline in the Elderly (IQCODE) with the participant's proxy. Read the script as provided on the form and code the appropriate responses. When completed, sum the numeric code values of scores. A score of xxx or higher indicates that proxy procedures will need to be implemented.

NOTE: This questionnaire was first administered during the 1995-1996 clinic year.
